

Claudiu Cojocaru

AI-Native Software Engineer · AI Agent Tooling

Constanța, Romania · kodji7202@gmail.com · github.com/kodji7202-code · pypi.org/project/runledger-ai

SUMMARY

AI-native engineer who builds software by directing AI coding agents. Focused on making AI coding agents safe, observable and affordable for teams. Creator of **RunLedger**, an open-source control plane for coding agents (Claude Code, Codex CLI, Aider): per-run receipts with cost and risk scoring, a real-time policy guard that blocks dangerous tool calls before they execute, and a self-hostable team server with approvals, budgets and compliance exports. I don't write code line by line: I design the architecture, orchestrate multiple AI workers in parallel, review their diffs and validate them with tests, which is exactly the workflow Droids enable.

FEATURED PROJECT

RunLedger: receipts, cost and a real-time guard for AI coding agents 2026 – present

Python 3.9+ · zero runtime dependencies · published on PyPI as `runLedger-ai` · GitHub Action · Docker

- Architected and shipped, through AI agents, ~17k lines of Python across CLI, parsers, risk engine and team server, backed by a **500+ test** suite and CI on Linux, macOS and Windows.
- Built **agent adapters** for Claude Code (stable), Codex CLI and Aider, plus an open native run format so any agent can emit receipts without a custom adapter.
- Turned raw agent session logs into **receipts** (HTML/Markdown/JSON): files changed, every step in plain language, model, tokens and estimated cost per step, and a 0–100 risk score with explanations.
- Implemented a **real-time guard** via Claude Code PreToolUse hooks: denies `rm -rf`, force pushes, `curl | sh`, `DROP TABLE`, hardcoded secrets; asks before `sudo`, `.env` reads or out-of-project writes; layered config where project policy can only tighten rules.
- Built a **team server**: shared dashboard, role-based API keys with rotation, audit log, human-in-the-loop approvals routed to Slack/webhooks, team budgets with alerts, CSV/compliance exports, TLS and trusted-proxy support.
- Shipped a **CI gate** (`--fail-on threshold`) and a GitHub Action posting a sticky receipt comment on every pull request.
- Local-first and privacy-respecting: no telemetry; optional Claude-powered summaries only on explicit opt-in.

EXPERIENCE

AI Software Engineer · Independent (RunLedger) 2026 – present

- Build and ship production-grade developer tools end to end with an orchestrator/worker workflow: one lead model plans and reviews, parallel agent workers implement, every change is validated by tests and CI.

Freelance Web Developer Past projects

- Delivered several small websites for clients, from requirements to deployment.

Public Sector Employee · Romania Current

- Work in Romanian public administration; experience with procedures, documentation and reliability.

SKILLS

AI agents	Claude Code, Codex CLI, Aider, agent hooks, multi-agent orchestration, prompt & context design, LLM cost modeling
Way of working	Vibe coding / AI-assisted engineering, task decomposition, code review of agent output, test-driven validation
Infra & DevOps Engineering	GitHub Actions, Docker / Compose, nginx, TLS, PyPI packaging, cross-platform CI CLI design, REST APIs, RBAC & audit logging, security policy engines, test-driven development, technical writing

EDUCATION

Ovidius University of Constanța · Computer Science
Constanța Maritime University
"Nicolae Iorga" Theoretical High School, Brăila · Mathematics–Computer Science
